

## TV Lifting Device GS1

Our design patented design line is developed to lift up a foldable LED TV and to turn it around max 350° in the upper position.

The TV is lifting up by two hydraulic cylinders with tooth belts. The retracting and extending positions of the cylinders are monitored by sensors. A rotary encoder is monitoring the rotation movement. The upper position is secured by three locking devices.

HABM-No.: 004755700-0001
